XDK

The Sensor X-perience

BOSCH

Start your Sensor X-perience

The Cross Domain Development Kit (XDK) is an all-in-one prototyping platform for any Internet of Things use case that you can imagine! With state of the art sensor technology and ready-to-use software packages it enables you to immediately start an Internet of Things application.

Enjoy our **all-in-one** IoT toolkit for sensor based projects

Why XDK?

XDK was built as an IoT prototyping platform for us to quickly create IoT products with ease. So we asked ourselves why not offer XDK to others to help them build their own application.

Use XDK

You have a great idea for an IoT application and want to prototype it professionally? Show the world, by using the XDK to realize your first prototype in a time and cost effective way.

What's next

Built your prototype? Great, we will help to get it to the next stage. Along with the XDK comes the right partner. We offer individual options for getting your prototype to series production.

32-bit microcontroller ARM
Cortex M3
Bluetooth LE
Wireless LAN
Debug & extension port

Micro SD
Push buttons
Status LEDs
Li-Ion rechargeable battery

Small but **mighty**

Due to its compact form factor, it can be retrofitted to objects of any size. Easily connect the XDK with other devices like your PC or a mobile device via USB, Bluetooth or WLAN. XDK functionality can also be expanded by using the included Extension Board to build in new features.

Accelerometer

Gyroscope

Magnetometer

Humidity sensor

Pressure sensor

Temperature sensor

Acoustic sensor

Digital light sensor

XDK Workbench

The software development environment, called XDK Workbench, is your tool to start building your project with the XDK right away. The Workbench is easy to install and automatically updates itself. The XDK comes with a direct interface to our community and access to different API¹-Layers.

There is no need to program via a debugger, but we have made this possible should you wish to use the standard JTAG connector. Drivers for all system components are included.

¹API = Application Programming Interface

Powerful Software Development Kit

An operating system, based on the open source operating system FreeRTOS, is already on the XDK and ready to go. With the provided API the development kit enables you the use of all of the hardware components that you desire. Various function blocks and algorithms are contained in the Toolbox.

The networking component offers Bluetooth and WiFi communication as well as LW-M2M communication protocol. So press power and immediately begin building. Realize your real time IoT applications.
