## SPSPFE3-0XG POWER SHELF

## Key Features \& Benefits

- Two 3-Phase inputs, one AC inlet powers 3 power modules.
- Modules are hot-swap capable.
- Modules support I2C communication interface for control, programming and monitoring with PMBus ${ }^{\text {TM }}$ protocol.
- Modules implement the following protections: Overtemperature, output overvoltage and output overcurrent.
- RoHS Compliant.

SPSPFE3-0XG power-shelf solutions provide rectification, system management, and power distribution, while maintaining high reliability and offering flexibility for future expansion.

The power shelf can be configured with up to six hot-swap capable PFE3000-12-069RA AC/DC-DC power supplies that convert 3phase AC mains power into a main output of 12 VDC for powering intermediate bus architectures (IBA) in high performance and reliability servers, routers, and network switches.

The shelf can be mounted to a 19inch or 21 inch rack system using adaptor mounting brackets and is compatible with the Open Compute rack design.

## SPSPFE3-OXG Power Shelf

## 1.ORDERING INFORMATION

| ITEM NUMBER | INPUT CONFIGURATION |
| :--- | :--- |
| SPSPFE3-02G | 3-phase, 400/480 VAC line to line input with Neutral line |
| SPSPFE3-03G | 3-phase, 208 VAC line to line input without Neutral line |

## 2.TECHNICAL DATA

## SPSPFE3-0XG

| Input | 3-phase, 400/480 VAC Line to Line input with Neutral ${ }^{1}$ <br> 3-phase, 208 VAC Line to Line input without Neutral ${ }^{2}$ |
| :--- | :--- |
| AC Inlet Configuration | 3 power modules are powered from one AC inlet |$|$| $3+3$ or $5+1$ configuration |
| :--- |
| Redundant Configuration |
| Rated Power 1 |

Notes: ${ }^{1}$ Power modules are connected Line to Neutral.
${ }^{2}$ Power modules are connected Line to Line.
${ }^{3}$ Rated Power is reduced as per current share accuracy characteristic. See PFE3000-12-069RA Datasheet
${ }^{4}$ Contact factory.

## 3. SAFETY WARNING

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user indemnifies Bel Power Solutions Inc. from all claims arising from the handling or use of the goods. Persons handling the product(s) must have electronics training and observe good engineering practice standards.

Caution: Multiple power source. Disconnect all power cords before servicing.

## 5. OVERVIEW

The SPSPFE3-0XG Power Shelf is a 1U height power shelf. It can be configured with up to six hot-swap capable PFE3000-12069RA AC/DC-DC power supplies that convert standard AC mains power into a main output of 12 VDC for powering intermediate bus architectures (IBA) in high performance and reliability servers, routers, and network switches.

## SPSPFE3-OXG Power Shelf

The I2C communication is routed thru an I2C Multiplexer (NXP PCA9547PW). PSU Modules support I2C communication interface for control, programming and monitoring with PMBus ${ }^{\top M}$ protocol.

### 7.1 Protection (Per Module)

| PARAMETER | DESCRIPTION / CONDITION | MIN | NOM | MAX | UNIT |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Input Fuses ( $\mathrm{L}+\mathrm{N}$ ) | Not user accessible, quick-acting (F) |  | 25 |  | A |
| OV Threshold $V_{1}$ |  | 13.6 | 14.2 | 14.8 | VDC |
| OV Latch Off Time $V_{1}$ |  |  |  | 1 | ms |
| OV Threshold $\mathrm{V}_{\text {SB }}$ |  | 13.3 | 13.9 | 14.5 | VDC |
| OV Latch Off Time V VB |  |  |  | 1 | ms |
| Current limitation | $\begin{aligned} & \mathrm{Ta}<45^{\circ} \mathrm{C} \\ & \mathrm{Ta}=55^{\circ} \mathrm{C} \end{aligned}$ | $\begin{aligned} & 248 \\ & 186 \end{aligned}$ |  | $\begin{aligned} & 274 \\ & 212 \end{aligned}$ | A |
| Current limit blanking time | Time to latch off when in over current | 20 | 22 | 24 | ms |
| Current limit during short time overload $V_{1}$ | Maximum duration 20ms, per module | 292 | 300 | 308 | A |
| Max Short Circuit Current $V_{1}$ | $V_{1}<3 \mathrm{~V}$, per module |  |  | $350{ }^{6}$ | A |
| Short circuit latch off time | Time to latch off when in short circuit |  | 10 |  | ms |
| Current limitation $\mathrm{V}_{\text {SB }}$ | Per module | 6 |  | 9 | A |
| Current limit blanking time | Time to hit hiccup when in over current |  |  | 1 | ms |
| Over temperature on critical points | Inlet Ambient Temperature PFC Primary Heatsink Temperature Secondary Sync Mosfet Temperature Secondary OR-ing Mosfet Temperature |  |  | $\begin{gathered} 60 \\ 80 \\ 115 \\ 125 \end{gathered}$ | ${ }^{\circ} \mathrm{C}$ |

Note: ${ }^{6}$ Limit doesn't include effects of main output capacitive discharge

### 7.2 Interface \& Control Signals

The PWOK_L open collector outputs of all modules are interconnected within the shelf and fed to the signal connector. The same applies to SMB_ALERT_L module and shelf signals. Sink current must not exceed 4 mA on each of these signals.

The internal INOK_L signal of individual modules are fed to microcontroller for modules synchronized AC startup. This allows the shelf to start up with load > 3000W during AC application. The microcontroller provide the INOK_L output signal.

A pull up resistor of $10 \mathrm{k} \Omega$ to 3.3 V within the shelf provides the high level voltage on PWOK_L, INOK_L and SMB_ALERT_L signals.

PWOK_L is low when there is at least one module in operation. INOK_L is low when there is at least one module supplied with correct input voltage.

ISHARE signal can be used when shelf are configured for redundant operation.
I2C Interface and Signal Connector (RJ45) Pin Out

| RJ45 PIN OUTS | FUNCTION | DESCRIPTION |
| :--- | :--- | :--- |
| $1^{7}$ | SCL | I2C clock signal line |
| $2^{7}$ | SDA | I2C data signal line |
| 3 | RESET | Reset pin of I2C Mux |
| 4 | PWOK_L | Power OK signal output: active-low |
| 5 | INOK_L | Input OK signal: active-low |
| 6 | SMB_ALERT_L | SMB Alert signal output: active-high |
| 7 | ISHARE | V1 Current share bus |
| 8 | SGND | Signal ground |

Note: ${ }^{7}$ External Pull-up resistor should be $2-5 \mathrm{k} \Omega$ to ensure SMBUS compliant signal rise times

## SPSPFE3-OXG Power Shelf

### 7.3 I2C Communication

The PSU Modules are set to a fixed I2C Address (0x20). PMBus communication for the PSU Modules are described in more detail in BCA. 00070.

The I2C communication to the PSU Modules are routed thru an I2C Multiplexer. The I2C MUX Control Register MUX needs to be configured so that the I2C frames are routed to the correct PSU Module. Refer to the I2C MUX datasheet for additional information.

The I2C MUX Address is configurable (via DIP Switch) to allow parallel configuration of several shelves.
The I2C MUX has a RESET input which can be used to recover from an I2C bus fault. A logic low signal on this pin resets the I2C MUX. If not used, this pin should be left floating.

### 7.4 I2C Addressing (Shelf)

The shelf default MUX address is $0 x E E$ and Controller address is $0 \times 5 \mathrm{E}$.
When DIP switch (SW1) is in "ON" position means 0, "OFF" Position means 1.
DIP Switch Position

| Position | Selected Unit |
| :---: | :---: |
| 1 | A0 |
| 2 | A1 |
| 3 | A2 |

DIP Switch Setting (SW1)

| AO | A1 | A2 | MUX ADDRESS (IN HEX) |
| :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | $0 x E 0$ |
| 1 | 0 | 0 | $0 \times E 2$ |
| 0 | 1 | 0 | $0 x E 4$ |
| 1 | 1 | 0 | $0 x E 6$ |
| 0 | 0 | 1 | $0 x E 8$ |
| 1 | 0 | 1 | $0 x E A$ |
| 0 | 1 | 1 | $0 x E C$ |
| 1 | 1 | $0 x E E$ |  |

Note: Communication Manual of shelf, see document BCA. 00178.
+1.866.513.2839

## SPSPFE3-OXG Power Shelf

### 7.5 Control LEDs

Each PSU front-end module has 2 LEDs to indicate status condition. LED number one is green and indicates AC power is on or off, while LED number two is bi-colored: green and yellow, and indicates DC power presence or fault situations.

| PARAMETER | DESCRIPTION / CONDITION | LED SIGNALING |
| :---: | :---: | :---: |
| AC LED | AC Line within range | Solid Green |
|  | AC Line UV condition | Off |
| DC LED ${ }^{8}$ | Normal Operation | Solid Green |
|  | PSON_L High | Blinking Yellow (1:1) |
|  | $V_{1}$ or $V_{\text {SB }}$ out of regulation |  |
|  | Over temperature shutdown |  |
|  | Output over voltage shutdown ( $V_{1}$ or $V_{\text {SB }}$ ) | Solid Yellow |
|  | Output under voltage shutdown ( $V_{1}$ or $V_{\text {SB }}$ ) |  |
|  | Output over current shutdown ( $V_{1}$ or $V_{\text {SB }}$ ) |  |
|  | Over temperature warning | Blinking Yellow/Green (2:1) |
|  | Minor fan regulation error ( $>5 \%$, <15\%) | Blinking Yellow/Green (1:1) |

Note: ${ }^{8}$ The order of the criteria in the table corresponds to the testing precedence in the controller.
7.6 USB Connector Type B

The USB interface is NOT galvanic isolated and referenced to the +12V_RTN / SGND lines.
Preferably, use a battery operated laptop to avoid earth loop issue.
If a Desktop Computer is being used, there is a risk of generating earth loop currents, therefore USB Isolators should be used.

## 7.7 +12VSB Connector

+12 VSB output is capable of delivering 5A. The output is protected by a PTC (16R900GF from Littelfuse).

| PIN OUTS | FUNCTION | DESCRIPTION |
| :--- | :--- | :--- |
| 1 | VSB_GND | $+12 V S B$ return |
| 2 | VSB | +12 VSB output |
| 3 | VSB_GND | $+12 V S B$ return |
| 4 | VSB | $+12 V S B$ output |
